

Overview

Konciv: Cylinder and Equipment Client Portal

Web-based database: hub.konciv.com/dashboard/analytics

A smarter way to manage cylinders and equipment. Improving traceability, minimising cost and optimising operations.

About Konciv

Konciv is a web-based database housed within Microsoft Azure and hosted by a 3rd party. It uses Microsoft authentication protocols to access in the same way as Teams or Outlook.

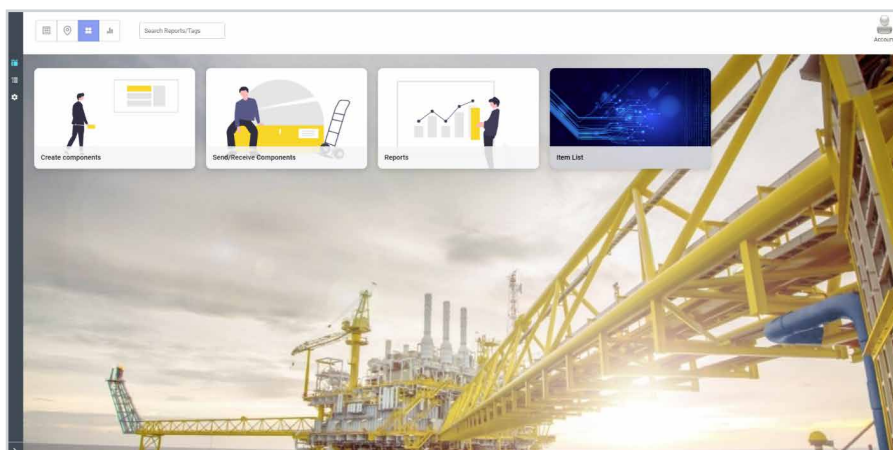

Intertek have been managing cylinders and rentals for over 40 years. Our database has now been expanded to give clients full visibility via portal access to provide control and efficiency, reducing loss, improving compliance and optimising asset utilisation.

What information is visible within the portal?

- Customer cylinders and /or Laboratory equipment are recorded in Konciv.
- The serial number and details/description of items
- The asset that they are allocated to
- The Process Step (In Laboratory, maintenance, dispatched) and sub-statuses
- Inspections/leak test and hydrostatic tests/certification dates in the record

Any rentals that are in place via Intertek will also be visible with the following additional information:

- Rig (rental location)
- Rental Start date

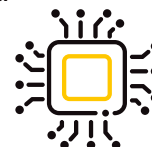

What is the benefit?

- Real-time visibility of where equipment is within Intertek (workshop, analysis, dispatched), knowledge of what cylinders are being sent onshore, when they arrive with us, when they are finished in the lab, when they have been sent back or if they are with a service company for repair will aid with operational planning and maintenance scheduling.
- Visibility of equipment inspection and certification dates. This will aid in ensuring that items are kept within certification or calibration and allow for planning of maintenance to minimise downtime and enhance operational reliability.
- Visibility of ongoing rental items and when rentals started will provide complete control of cylinder and equipment management, increases transparency and drives overall cost reductions and improves efficiency.

- Ability to extract this information for clients to use in reports or manipulate to further drill into information and transforms how cylinder and equipment are managed.

For any questions or for more information, please reach out to the team using the details below.
